Ever wondered what more than 20 years of compost application does to soil?

Here's a little challenge: Can you guess which soil has received no fertilization and which one has been treated with compost?

A few weeks ago, I had the pleasure of visiting the CRUCIAL trial led by Jakob Magid. This long-term experiment compares different recycled fertilizers with animal manures and mineral fertilization. The differences in soil structure are truly astonishing! After spending so much time working with the trial data, it was great to finally see the results in person.

If you're interested in recycled fertilizers and their impact on soil fertility, I highly recommend paying this trial a visit. It's definitely worth it!
