Økologiske sortsblandinger og heterogent materiale af vinterhvede

Konventionelle forsøg har vist, at sortsblandinger giver større udbytter end enkeltsorterne dyrket hver for sig og at dyrkning af sortsblandinger reducerer angreb af Septoria. I dette forsøg undersøges ukrudtskonkurrenceevne, sygdomsmodtagelighed, udbytte og kvalitet i sortsblandinger, enkeltsorter dyrket i renbestand og i økologisk heterogent materiale.

Led 1: Måleblanding
Led 2: Pondus, Pacman, Fritop
Led 3: Pondus, Pacman, Fritop, SY Revolution
Led 4: Bright, LG Initial, KWS Extase
Led 5: Bright, KWS Emerick, LG Initial, KWS Extase
