🌱 Advancing Sustainable Oat Breeding 🌱

We have been awarded £100,000 by the [Novo Nordisk Foundation](#) to support a new international research initiative.

In collaboration with the [Innovationscenter for Økologisk Landbrug](#) (Denmark), Nordic Genebank ([NordGen](#)), and [Aarhus University](#), this three-year project aims to identify nutritionally superior and yield-stable oat varieties through a combination of experimental and on-farm field trials across a range of diverse environments and organic management systems.

This work supports the development of more resilient, nutritious crops—essential for the future of food security and sustainable agriculture.

"We will focus on the need to develop robust organic-ready oat cultivars specifically tailored to sustainable organic production and address some of the emerging challenges in food and help secure food production."
